

Critical Situations Innovative Solutions

OTTO announces the new **Lightsword Speaker Microphone** with LED lighting feature, adding a new level of functionality to the traditional speaker microphone. Lightsword integrates a super bright LED into the front cover of an Evolution style speaker mic, providing hands free illumination of the immediate area with the flip of a switch. Lightsword can also be used as a mini-flashlight when removed from the lapel and held in the hand. Lightsword is not designed to replace traditional service flashlights, but does offer the convenience and safety of an auxiliary and back up light incorporated into the traditional lapel worn speaker microphone.

- Design based on the proven OTTO Evolution speaker microphone platform
- A 11,000 milli-candela super bright LED with 20 degree beam width
- Use as an auxiliary or back-up light source
- Minimal draw on radio's battery life*
- 2.5 mm earphone jack for optional earphone accessories
- Durable design and construction to meet MIL-STD-810 blowing rain seal
- Clothing spring clip which can be positioned 360 degrees
- US Patent # 6,315,425
- Ideal for police, fire, military and industrial applications

* Based on using a 1500 mah battery, one hour of Lightsword (lights on) operation is equal to about one minute of radio transmit time. Actual results will vary based on battery condition and other factors.
